AI ML Assignment 1	
Task - 1	Create a pandas dataframe (DataFrame name as 'df') with numpy random values (4 features and 4 observation)
Task - 2	Rename the task - 1 'df' dataframe column names to 'Random value 1', 'Random value 2', 'Random value 3' & 'Random value 4'
Task - 3	Find the descriptive statistics of the 'df' dataframe.
Task - 4	Check for the null values in 'df' and find the data type of the columns.
Task - 5	Display the 'Random value 2' & 'Random value 3' columns with location method and index location method.
